

Priority and Provenance

The ARC Principle & the Eden Protocol · Michael Darius Eastwood · OSF DOI 10.17605/OSF.IO/6C5XB
Read this first if you are assessing when this work was created.

OSF deposit dates are not creation dates. Public deposit of this project began on **17 March 2026**; individual working papers were deposited between March and July 2026. The underlying thesis is cryptographically timestamped from **8 December 2024** — fifteen months before the first deposit. Do not read a file's OSF upload date, or its position in the version stack, as the date the idea was created. The priority anchors below are independently checkable; the deposit dates are not the evidence of priority and were never intended to be.

The priority timeline (with independently verifiable anchors)

Date	Event	Independent anchor — how to verify
8 Dec 2024 02:45:18 UTC	Core thesis — the substrate-level correction requirement and the governing relation $U = I \times R$ — written into a self-emailed manuscript bundle (four .txt attachments, 189,355 words).	Exported .eml SHA-256 f0d1f38ffd8546152d9d9d28dc5ec083c16a35858f2c12b63e69db7ed50901ad . Gmail Message-ID CAGPsKAnp-DLDB0eBAh4t9XsqJBKdoe07u0RGF86meoSMFnin7w@mail.gmail.com , Google-server-timestamped, DKIM-verified in transit. Recompute the hash on the original .eml to confirm.
30 Apr 2025	Expanded manuscript (562 pages). First appearance of the name <i>Eden Protocol</i> and the <i>Babylon vs Eden</i> framing; the thesis itself was already timestamped in December 2024.	Manuscript SHA-256 09f5b5e156ed96f8883eaf668495fd350898ce62be6294b8f788e0e2d6dcb664 .
2 Jan 2026	<i>Infinite Architects: Intelligence, Recursion, and the Creation of Everything</i> published (print; ebook 6 Jan 2026).	ISBN 978-1806056200 — public bookseller and national-deposit records carry the publication date.
17 Mar 2026	First OSF deposit of the document suite (this is a deposit date, not a creation date).	OSF Storage — version 1 of the earliest-deposited files (Executive Summary, Eden Vision, Foundational, Paper I) is dated 17 Mar 2026 in each file's <i>Revisions</i> tab.
26 Jun 2026	Paper X (The Coupled Co-Scaling Correction) working paper — first 45-trajectory real-model run.	OSF component DOI and git history (github.com/MichaelDariusEastwood/arc-principle-validation).
3 Jul 2026	HRIH (Hyperspace Recursive Intelligence Hypothesis) first public release; original manuscript 8 Dec 2024, SHA-256-anchored above.	OSF component DOI 10.17605/OSF.IO/UYDXQ; the underlying 8 Dec 2024 anchor is the .eml hash above.
Jul 2026	Papers C (Polymathy and Neurodivergent Cognition) and XI (Convergent Evidence) deposited.	OSF component DOIs 10.17605/OSF.IO/RBHDP (C) and the Paper XI component; git history.

How this project's files are organised (so nothing is misread)

- **Canonical files at OSF Storage root** carry no version number in the filename. Each document has exactly one canonical name; its full history is the *Revisions* tab on that file.
- **The version stack IS the history.** Uploading a corrected file under the same name adds a new version on top — it never overwrites the earlier one. Example: *Executive-Summary.pdf* holds four versions, version 1 dated 17 March 2026, the latest dated 4 July 2026. Click *Revisions* on any file to see every dated version.
- **The `archive/` folder** holds superseded, separately-named earlier drafts (e.g. *Eden-Vision-v2*, *Executive-Summary-v6*) from the pre-canonical naming era. They are kept for the record and carry their own original March 2026 dates. They are historical copies, not the primary priority record — the primary record is the anchors in the table above and the *Revisions* tabs.
- **Nothing is ever deleted.** Superseded material is moved to `archive/`, never removed.

What priority is, and is not, claimed

Priority is claimed only for what the anchored artifacts actually contain on their timestamped dates — the correction-requirement thesis and the $U = I \times R$ relation (8 Dec 2024), and the named Eden Protocol framing (30 Apr 2025). Where independent researchers reached related results, priority is credited to them in Paper XI wherever their dates require it; several convergences are explicitly logged as concurrent or later than the external work, not as claims against it. This document establishes when this author's own artifacts existed; it does not assert that no one else has reasoned about recursion, correction, or scaling.

Verification is invited, not asserted: recompute the SHA-256 of the original .eml and manuscript to confirm the hashes above; check the OSF *Revisions* tabs for the deposit-version dates; check ISBN 978-1806056200 for the publication date. This document is part of the ARC/Eden research programme and is authored with AI assistance under human direction and authorship (see any programme paper's closing Declaration).
